S4 Proper eating, tasting, drinking, or tobacco use

2-401.11 Eating, Drinking or Using Tobacco

Observed employee drink stored in an undesignated area. Proper hygienic practices must be followed by food employees in performing assigned duties to ensure the safety of the food, prevent the introduction of foreign objects into the food, and minimize the possibility of transmitting disease through food.

Location: IN SALAD PREPARATION AREA ON COUNTER TOP / PREP TABLE

Activity: AN EMPLOYEE DRINK IN A TO GO CONTAINER WITHOUT A STRAW

Drinking or eating by employees in food preparation areas is prohibited because of the potential that the hands, food, and food-contact surfaces may become contaminated.
Employees working a grill may have drinks at the work station so long as they are in a closed container with a tight fitting lid and straw that prevents hand to mouth contact.
Instructed PIC to retrain employees on employee food and drink storage only in designated drinking and eating areas. Also reminded PIC that employees must wash hands after eating or drinking and returning to work areas.

Observed employee relocate their drink away from salad preparation area during inspection. Violation corrected on site.

S36 Insects, rodents, and animals not present

6-202.15 Outer Openings, Protected

Observed back door propped opened to the outside, with no screen or protection from pest entry at the time of inspection.

Insects and rodents are vectors of disease-causing microorganisms which may be transmitted to humans by contamination of food and food-contact surfaces. The presence of insects and rodents is minimized by protecting outer openings to the food establishment.

Instructed PIC that the openings shall be protected against the entry of insects and rodents by:
(1) 16 mesh to 25.4 mm (16 mesh to 1 inch) screens;
(2) Properly designed and installed air curtains to control flying insects; or
(3) Other effective means.

Also instructed PIC to contact CHPD inspector when outer openings protection is installed for verification.

S41 In-use utensils: properly stored

3-304.12 In-Use Utensils, Between-Use Storage

Observed utensils during a pause in use stored incorrectly. Utensil was stored in food with their handle not above the top of the food and the container.

Utensil Type: ICE SCOOP

Location: INSIDE ICE MACHINE

Condition of the Location: NOT STORED WITH HANDLE EXTENDED, LAYING FLAT IN ICE MACHINE WITH HANDLE IN DIRECT CONTACT WITH ICE.

During pauses in food preparation or dispensing, food preparation and dispensing utensils shall be stored: (A) In the food with their handles above the top of the food and the container;
(B) In food that is not time/temperature control for safety food with their handles above the top of the food within containers or equipment that can be closed, such as bins of sugar, flour, or cinnamon;
(C) On a clean portion of the food preparation table or cooking equipment only if the in-use utensil and the food-contact surface of the food preparation table or cooking equipment are cleaned and sanitized at a frequency specified under §§ 4-602.11 and 4-702.11;
(D) In running water of sufficient velocity to flush particulates to the drain, if used with moist food such as ice cream or mashed potatoes; (E) In a clean, protected location if the utensils, such as ice scoops, are used only with a food that is not time/temperature control for safety food; or
(F) In a container of water if the water is maintained at a temperature of at least 57oC (135oF) and the container is cleaned at a frequency specified under Subparagraph 4-602.11(D)(7). Educated and informed PIC on how to properly store utensils.

3-501.17 Ready-To-Eat Potentially Hazardous Food (Time/Temperature Control for Safety Food), Date Marking
3-501.18 Ready-To-Eat Potentially Hazardous Food (Time/Temperature Control for Safety Food), Disposition

Observed ready-to-eat time and temperature controlled for safety food commercially prepared opened in the facility inappropriately marked and exceeding the seven (7) day time limit.
Location:Walk in cooler
Food Items: Pumpkin puree
Expiration Dates: Product had been opened for nine (9) days, and was marked to expire 5/19 22 days after opening. Ready-to-eat, time/temperature control for safety food commercially prepared and opened, held longer than a 24 hour period shall be marked to indicate the date or day by which the food is to be consumed on the premises, sold, or discarded when held at a temperature of 41°F or less for a maximum of 7 days.
Instructed PIC to retrain food employees on the proper date marking of food items held longer than 24 hour period inside the facility.
PIC voluntarily discarded food items bearing inappropriately marked and exceeding time limit.

S47 Nonfood-contact surfaces clean

4-601.11(B) and (C) Equipment, Food-Contact Surfaces, Nonfood-Contact Surfaces, and Utensils
4-602.13 Nonfood Contact Surfaces

Observed nonfood contact surface with the build up of soil residues.
The surface was located throughout the facility including piping, plumbing, and inside the walk in cooler.
The condition of the surface was coated in significant debris and soil. Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the build up of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests .
Instructed PIC to create a cleaning schedule and to clean the surface.

S49 Plumbing installed; proper backflow devices

5-205.15 System Maintained in Good Repair

Observed faucet/sprayer, and hose systems for sinks and mop sinks are not maintained in good repair or is not repaired by law .
Observed faucet/sprayer and hose systems found in disrepair by continuously spraying, and leaking. Improper repair or maintenance of any portion of the plumbing system may result in potential health hazards such as cross connections, backflow, or leakage. These conditions may result in the contamination of food, equipment,
utensils, linens, or single-service or single-use articles. Improper repair or maintenance may result in the creation of obnoxious odors or nuisances, and may also adversely affect the operation of warewashing equipment or other equipment which depends on sufficient volume and pressure to perform its intended functions.

S51 Toilet facilities: properly constructed, supplied, & cleaned

6-501.19 Closing Toilet Room Doors
6-202.14 Toilet Rooms, Enclosed

Observed toilet room is not equipped with a tight-fitting self-closing door; or the door is propped open. Instructed to enclose and provide the toilet rooms with a tight-fitting and self-closing door; and, that they must be maintained closed except during cleaning and maintenance.

S53 Physical facilities installed, maintained, and clean

6-501.11 Repairing-Premises, Structures, Attachments, and Fixtures-Methods

Observed the following areas of the facility in disrepair.
Observed gaps, holes and crevices in the walls and ceilings including in ware washing area, production area, counter area and storage areas, by no longer adequately forming a barrier and potentially causing contamination. Additionally, observed base coving coming off in parts throughout the facility. Poor repair and maintenance compromises the functionality of the physical facilities. This requirement is intended to ensure that the physical facilities are properly maintained in order to serve their intended purpose.
Instructed PIC to contact repair personnel to have gaps, holes, crevices, repaired and base coving repaired so that it is able to serve their intended purpose properly.

6-501.12 Cleaning, Frequency and Restrictions

Observed significant quantities of build up and debris on the floors and walls throughout the entire facility. Cleaning of the physical facilities is an important measure in ensuring the protection and sanitary preparation of food. A regular cleaning schedule should be established and followed to maintain the facility in a clean and sanitary manner. Primary cleaning should be done at times when foods are in protected storage and when food is not being served or prepared.

Instructed person in charge to remove build up and debris on floors and walls.

6-201.12 Floors, Walls, and Ceilings, Utility Lines

Observed floor is constructed of poor repaired concrete making it rough and/or absorbent. Floors that are of smooth, durable construction and that are nonabsorbent are more easily cleaned. Requirements and restrictions regarding floor coverings, utility lines, and floor/wall junctures are intended to ensure that regular and effective cleaning is possible and that insect and rodent harborage is minimized.
Instructed PIC to install

S54 Adequate ventilation and lighting; designated areas used

6-501.14 Cleaning Ventilation Systems, Nuisance and Discharge Prohibition

Observed interior intake and exhaust air ducts with debris build up.
Location: Production Area. Instructed PIC to clean and sanitize the indoor ventilation system and to replace filters as necessary to prevent it from becoming a source of contamination of food and food contact surfaces in the surrounding area.

3-306.11 Food Display-Preventing Contamination by Consumers

Observed food on display that was not protected from contamination by the environment or potential consumers.
Location: hot holding serving line
Food Item: pre cooked pizza
Condition: ready to eat items exposed to possible contamination form consumer

During display, food can be contaminated even when there is no direct hand contact. Many microbes can be conveyed considerable distances on air currents through fine sprays or aerosols. These may originate from people breathing or sneezing, water sprays directed at drains, or condensate from air conditioners.
Except for shelled nuts or raw uncut fruits and vegetables food on display shall be protected from contamination by the use of packaging; counter, service line, or salad bar food guards; display cases; or other effective means

VIOLATION WAS CORRECTED ON SITE BY PLACING LIDS OVER READY TO EAT ITEMS.

S47 Nonfood-contact surfaces clean

4-602.13 Nonfood Contact Surfaces

Observed nonfood contact surface with the build up of soil residues.
The surface was located near south wall in cafeteria
The surface was made out of stainless steel reach in cooler and mircowave
The condition of the surface was reach in cooler soiled with dry milk debris, microwave had food debris build up.

Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the build up of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests.

Observed nonfood contact surface that was absorbent, porous and not smooth at the time of inspection.

The surface was located in the deli area.

The surface was made out of cabinet, unsealed wood

The condition of the surface was not smooth, absorbent.

Nonfood-contact surfaces of equipment routinely exposed to splash or food debris are required to be constructed of nonabsorbent materials to facilitate cleaning. Equipment that is easily cleaned minimizes the presence of pathogenic organisms, moisture, and debris and deters the attraction of rodents and insects.
Instructed PIC to replace the surface with a material that is nonabsorbent.

3-101.11 Safe, Unadulterated and Honestly Presented
§ 9-6-1-9 EXAMINATION AND CONDEMNATION OF FOOD

Observed food that is unsafe for consumption present inside the facility.
Food: Mixed red chile and green chile popcorns 61.2 pounds, red chile limon popcorn 112.8 pounds, green chile butter popcorn 19.8 pounds, 87.6 pounds, Sweet green chile popcorn, 7.0 pounds, chicano popcorn 11.8 Location: Processing storage area
Condition: Food product had chile products that must be heated to 165F prior to use for human consumption. Food shall be safe, unadulterated, and, honestly presented. Pathogens may be transmitted from person to person through contaminated food. The potential spread of illness is limited when food is discarded if it may have been contaminated by employees who are infected, or are suspected of being infected, or by any person who otherwise contaminates it. Food may also be contaminated b other means that endanger their safety and present a serious potential hazard.
Instructed PIC that food that is unsafe, adulterated, not honestly presented must not be served or offered for sale. PIC voluntarily discarded all product into dumpster which is surrounded by fence and gates.

S14 Food-contact surfaces: cleaned and sanitized

4-501.114 Manual and Mechanical Warewashing Equipment, Chemical Sanitization-Temperature, pH, Concentration and Hardness
4-703.11 Hot Water and Chemical-Methods

Observed chlorine solution utilized to sanitize food contact surfaces failing to meet parameters to adequately achieve sanitization.
Location: 3 compartment sink
Concentration: below 25ppm
Temperature: 68.0F. The effectiveness of chemical sanitizers can be directly affected various factors including by the temperature, and concentration of the sanitizer solution used. Sanitizers shall be used in accordance with the EPA-registered label use instructions, and shall be used within designated parameters. Instructed PIC that for chlorine sanitizer at a concentration range of 25-49ppm must also be at a minimum temperature of 120F with a contact time of 10 seconds, or concentration range of 50-99ppm must also be at a minimum temperature of 75F with a contact time of 7 seconds.
PIC corrected violation by draining 3 compartment sink basin, refilling the basin with fresh warm water and additional chlorine, 1st time it was remade the sanitizer failed to meet parameters, the 2nd time sanitizer reached PPM of 50. Instructed PIC to retrain employees on correct procedure for making sanitizer concentration and to test it when making to ensure it meets criteria.

S35 Food properly labeled; original container

Observed foods packaged inside the facility without necessary labeling.
Location: Retail area, processing area and shipping area.
Food Items: 2x Chocolate Drizz Popcorn, Dark Chocolate Espresso Bean Popcorn, Lemon Cookie Crumble Popcorn, Corn Oil, Butter Oil, Breakfast Sausage Popcorn, Creamy Red Chile Limon Popcorn, Caramel Cheddar Popcorn, NM Sunset Popcorn, Green Chile Caramel Popcorn, Movie Butter Popcorn, Red Chile Limon Popcorn, Lightly Salted Popcorn, Green Chile Butter Popcorn, Rosemary Garlic Popcorn, Caramel Kettle Mix Popcorn, Lightly Salted Movie Butter Popcorn, Kettle Corn Popcorn, Caramel Popcorn, Sweet Green Chile Popcorn, Red Chile Caramel Popcorn, Cookies n Cream Popcorn, Circus Animals Popcorn.
Manner: Foods products were missing address, accurate list of ingredients some products were missing numerous ingredients from labels or were only partially filled, declaration of net weight or volume, allergen information including on undeclared ingredients. Food labels serve as a primary means by which consumers can make informed decisions about their food selections and answer questions including ingredients, allergens, weight, and manufacturer.
Food must be labeled as specified by 21 CFR 101 - Food labeling, and 9 CFR 317 Labeling, marking devices, and containers. This must include:
(1) The common name of the food, or absent a common name, an adequately descriptive identity statement;
(2) If made from two or more ingredients, a list of ingredients and subingredients in descending order of predominance by weight, including a declaration of artificial colors, artificial flavors and chemical preservatives, if contained in the food;
(3) An accurate declaration of the net quantity of contents;
(4) The name and place of business of the manufacturer, packer, or distributor; and
(5) The name of the food source for each major food allergen contained in the food unless the food source is already part of the common or usual name of the respective ingredient.
(6) Nutrition labeling as specified in 21 CFR 101 - Food Labeling and 9 CFR 317 Subpart B Nutrition Labeling, if required by law.
(7) For any salmonid fish containing canthaxanthin or astaxanthin as acolor additive, the labeling of the bulk fish container, including a list of ingredients, displayed on the retail container or by other written means, such as a counter card, that discloses the use of canthaxanthin or astaxanthin
. Instructed PIC to correct mislabeled food product prior to continuing to offer for sale.

3-302.12 Food Storage Containers Identified with Common Name of Food

Observed food that is not readily and unmistakably recognized removed from original packaging without proper labeling or identification.
Working Container of Food: unknown bulk ingredients
Location: production area. Certain foods may be difficult to identify after they are removed from their original packaging. Consumers may be allergic to certain foods or ingredients or the mistaken use of food from labeled containers could result in chemical poisoning and may result in severe medical consequences. Working containers holding food or food ingredients that are removed from their original packages for use in the food establishment shall be identified with the common name of the food.
Instructed PIC to label all containers.

S36 Insects, rodents, and animals not present

6-202.15 Outer Openings, Protected

Observed doors to the outside that are not tight fitting, light can be seen at the edges. The presence of insects and rodents is minimized by protecting outer openings to the food establishment. Outer openings of a food establishment shall be protected against the entry of insects and rodents by having solid, self-closing, tight-fitting doors.
Instructed PIC to repair or replace the doors so that they are solid, self-closing, and tight-fitting. Light should not be seen through the door when closed. Self-closing doors are not required when they are exit doors that are solid and tight-fitting, designated as an emergency exit, or have limited use.

S41 In-use utensils: properly stored

3-304.12 In-Use Utensils, Between-Use Storage

Observed utensils with use for non-time/temperature controlled for safety food during a pause in use stored incorrectly. Utensil was stored in food with their handle not above the top of the food.
Utensil Type: measuring cups
Location: bulk ingredient storage
Condition of the Location: Measuring scoops were stored handle down into the food products. Multiuse utensils which have been cleaned and sanitized can become contaminated with pathogens which can be transferred to food from utensils that have been stored on surfaces which have not been cleaned and sanitized.
Instructed PIC to clean and sanitize utensils prior to continuing use, must be maintained cleaned in a regular schedule as prescribed by the code and to store items so that the risk of contamination prior to use is minimized.

S47 Nonfood-contact surfaces clean

4-601.11(B) and (C) Equipment, Food-Contact Surfaces, Nonfood-Contact Surfaces, and Utensils
4-602.13 Nonfood Contact Surfaces

Observed nonfood contact surface with the build up of soil residues.
The surface was located on the exterior of bulk storage for ingredients, and cooking vessels
The condition of the surface was coated in debris, and oil residues. Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the build up of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests.
Instructed PIC to create a cleaning schedule and to clean the surface.

S53 Physical facilities installed, maintained, and clean

6-501.11 Repairing-Premises, Structures, Attachments, and Fixtures-Methods

Observed the following areas of the facility in disrepair.
Observed gaps, holes and crevices in the walls and ceilings throughout facility, by no longer adequately forming a barrier and potentially causing contamination. Additionally, observed base coving coming off in parts throughout the facility. Poor repair and maintenance compromises the functionality of the physical facilities. This requirement is intended to ensure that the physical facilities are properly maintained in order to serve their intended purpose.
Instructed PIC to contact repair personnel to have gaps, holes, crevices, repaired and base coving repaired so that it is able to serve their intended purpose properly.

S8 Adequate hand washing sinks properly supplied and accessible

5-204.11 Handwashing Sinks-Location and Placement

Observed facility with an inadequate number of handwashing sinks necessary for the convenient use by employees.
Location: Warewashing area
Condition: Area in which warewashing occurs is missing a required handwashing sink, only one hand washing sink is available in the facility. This warewashing area is partially through production area, warehouse area and into the warewashing room, excessively far from any available handwashing sink. Hands are a common vehicle for the transmission of pathogens to foods in an establishment. Hands can become soiled with a variety of contaminants during routine operations. The transfer of contaminants can be limited by providing food employees with handwashing sinks that are properly equipped and conveniently located. Hand washing sinks must be installed as required by law, and handwashing sinks shall be located to allow convenient use by employees in food preparation, food dispensing, and warewashing areas, and in or immediately adjacent to, toilet rooms. Instructed PIC to install handwashing sink(s) warewashing area.

S14 Food-contact surfaces: cleaned and sanitized

4-601.11(A) Equipment, Food-Contact Surfaces, Nonfood-Contact Surfaces, and Utensils

Observed equipment food-contact surface with the build up of soil residues at the time of inspection.

Equipment Type: PLASTIC CONTAINERS USED TO HOLD CORN STARCH

Location: ON SHELVING UNIT IN PREP / WAREWASHING AREAS

Condition of the Location: DRIED FOOD DEBRIS ON SURFACES OF CONTAINER

Food-contact surfaces of equipment shall be cleaned at a frequency to prevent the build up of soil residues. The presence of food debris or dirt on food contact surfaces may inhibit the ability to sanitize and provide a suitable environment for the growth of microorganisms which food employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests.
Instructed PIC to create a cleaning schedule and to clean the surface. Reminded PIC that requirements food-contact surfaces must be cleaned include: with each different type of raw animal food unless following the succession of cook temperatures, when changing from raw foods to ready-to-eat foods, between raw fruits and vegetables and with time/temperature control for safety foods (TCS), before using or storing food temperature measuring devices, at any time it may have been contaminated and if used with TCS foods every 4 hours."

S20 Proper cold holding food temperatures

3-501.16(A)(2) and (B) Potentially Hazardous Food (Time/Temperature Control for Safety Food), Hot and Cold Holding

Observed food items in cold holding unit measuring above 41°F.

Location: ON PREP TABLE

Food Items: CONTAINER OF NOODLES

Temperature:58*F

Maintaining TCS foods under the cold temperature control requirements prescribed in this code will limit the growth of pathogens that may be present in or on the food and may help prevent foodborne illness. Instructed PIC to rapidly chill food to below 41°F as measured by a calibrated thermometer.PIC stated that noodles were removed for lunch rush, no more than 2 hours. Observed PIC relocate noodles to cold holding equipment. Violation corrected on site.

S41 In-use utensils: properly stored

3-304.12 In-Use Utensils, Between-Use Storage

Observed utensils with use for non-time/temperature controlled for safety food during a pause in use stored incorrectly. Utensil was stored in food with their handle not above the top of the food at the time of inspection.

Utensil Type: PLASTIC SINGLE SERVICE CONTAINER

Location: IN DIRECT CONTACT WITH CORN STARCH

Condition of the Location: SINGLE SERVICE CONTAINER DOES NOT HAVE REQUIRED HANDLE

Multiuse utensils which have been cleaned and sanitized can become contaminated with pathogens which can be transferred to food from utensils that have been stored on surfaces which have not been cleaned and sanitized.
Instructed PIC to clean and sanitize utensils prior to continuing use, must be maintained cleaned in a regular schedule as prescribed by the code and to store items so that the risk of contamination prior to use is minimized."

S45 Food and non-food contact surfaces cleanable, properly designed, constructed, and used

4-202.11 Food-Contact Surface's-Cleanability

Observed food contact surfaces made of a material that is unsafe and nondurable. Containers were not resistant to pitting, chipping, crazing, scratching, scoring, distortion or decomposition. Materials utilized must not transfer detrimental substances to food, and inhibit the ability the ability to clean and sanitize. Observed a cardboard box being used as a food container for fried wontons at the time of inspection.

Materials of food-contact surfaces shall be safe and durable. Food-contact surfaces must be resistant to pitting, chipping, crazing, scratching, scoring, distortion or decomposition. Instructed PIC to cease use of the unsafe and nondurable food contact surfaces and to replace or utilize alternative food contact surfaces made of material that is safe and durable and is able to be washed, rinsed and sanitized.

S47 Nonfood-contact surfaces clean

4-601.11(B) and (C) Equipment, Food-Contact Surfaces, Nonfood-Contact Surfaces, and Utensils

Observed nonfood contact surface with the build up of soil residues at the time of inspection.

The surface was located in prep and warewashing area.

The surface was Plastic shelving unit

The condition of the surface was: DRIED CORN STARCH, DEBRIS AND BUILD UP.

Nonfood contact surfaces of equipment shall be cleaned at a frequency to prevent the build up of soil residues. The presence of food debris or dirt on nonfood contact surfaces may provide a suitable environment for the growth of microorganisms which employees may inadvertently transfer to food. If these areas are not kept clean, they may also provide harborage for insects, rodents, and other pests.
Instructed PIC to create a cleaning schedule and to clean the surface.
